

Eric Ofei-Kwapong

Senior Product Manager | Supply Chain, Logistics, Warehouse & Order Management Platforms
Rotterdam, South Holland, Netherlands | eokwaku@icloud.com | <https://www.linkedin.com/in/eric-ofei-kwapong-834758124>

TARGETED SUMMARY

Senior product and technical program leader specializing in internal logistics platforms, warehouse and fulfillment workflows, order/delivery operations, and scalable operational systems. At Zipline, led and coordinated product, engineering, QA, data, support, training, and operations work for mission-critical logistics platforms across multi-country environments. Strong in defining product vision, translating user research and operational bottlenecks into roadmaps and user stories, prioritizing between new features and reliability, launching global platform improvements, and using operational KPIs and data signals to improve business impact and customer/operator satisfaction.

ROLE-MATCHED COMPETENCIES

Senior Product Management; Supply Chain and Logistics Platforms; Warehouse Management Workflows; Order Management / Delivery Operations; Internal Applications; Product Vision and Strategy; Roadmap Ownership; User Research and Usability Feedback; Benchmarking and Workflow Analysis; KPI Definition and Business Impact Measurement; Operational Analytics and Data-Driven Decisions; AI-Assisted Product Execution and Prototyping; Agile/Scrum Delivery; User Stories and Acceptance Criteria; Cross-Functional Implementation; Engineering / Design / QA / Support Coordination; Scalable Architecture Partnership; Dependency Management; Production Support and Incident Response; Global Rollouts; Operator Training and Adoption; Stakeholder Communication; Operational Excellence; EMEA-Based Logistics Context

PROFESSIONAL EXPERIENCE

Technical Program Manager, Data Engineering + Software Platforms | Zipline

March 2026 - Present | Rotterdam, South Holland, Netherlands

- Own execution rhythm and roadmap coordination across software and data engineering initiatives supporting internal logistics platforms used across multiple countries.
- Define intake, triage, prioritization, and delivery governance for product features, platform improvements, data pipeline requests, analytics needs, and production support work.
- Translate stakeholder needs into structured roadmaps, user stories, dependencies, and delivery plans across software, data, QA, operations, and production support teams.
- Prioritize between new product capabilities, architectural improvements, reliability work, and operational excellence using business impact, urgency, support load, and delivery capacity.
- Define and monitor execution KPIs including queue health, cycle time, unplanned work, delivery predictability, stakeholder visibility, and operational support patterns.
- Use AI-assisted workflows to accelerate synthesis, product planning, user-story drafting, operational analysis, prototype thinking, and roadmap communication.
- Partner with engineering teams on scalable solution design so local operational fixes can become reusable platform improvements.

Application Systems Engineer | Zipline

March 2025 - March 2026 | Rotterdam, South Holland, Netherlands

- Led a core engineering team delivering high-priority improvements to fulfillment, warehouse-adjacent, and operations software in a reliability-sensitive logistics environment.
- Owned production support, incident response, runbooks, troubleshooting guides, and escalation paths for mission-critical internal applications.
- Converted support trends, operator pain points, and incident learnings into product priorities, backlog improvements, and usability fixes.
- Worked directly with engineering and operations to improve product quality, reduce repeat issues, and keep critical workflows stable during fast operational growth.

Platform Product Manager | Zipline

July 2022 - March 2025 | Ghana

- Owned product vision, roadmap, and delivery for internal fulfillment and operations platforms supporting multi-country drone delivery operations.
- Led discovery with warehouse, fulfillment, flight, customer support, training, and operations stakeholders to identify customer/operator needs and convert them into product strategy and requirements.
- Scoped high-impact initiatives from operational bottlenecks across warehouse execution, inventory/fulfillment workflows, order delivery processes, flight operations, and support workflows.
- Wrote and refined requirements, user stories, acceptance criteria, rollout plans, SOPs, training materials, and launch communications for internal product changes.
- Led global feature rollouts from discovery through engineering delivery, QA coordination, release readiness, operator training, adoption monitoring, and post-launch iteration.
- Used operational metrics, user feedback, support signals, and adoption patterns to evaluate product impact and guide roadmap decisions.

Product Operations Analyst, Ground Applications | Zipline

January 2021 - July 2022 | Ghana

- Embedded with frontline operations teams to run workflow analysis, gather user needs, validate product changes, and surface internal-tool opportunities for ground operations software.
- Supported product teams with requirements discovery, rollout coordination, usability feedback loops, operational readiness, and adoption tracking.

Fulfillment Operations Professional | Zipline

May 2020 - July 2022 | Northern Region, Ghana

- Managed live inventory, fulfillment, and order execution workflows in a medical logistics environment, building firsthand warehouse and operational systems expertise.
- Developed deep practical context on operator needs, fulfillment constraints, inventory accuracy, handoffs, exceptions, and process discipline that later informed product strategy.

EARLIER HEALTHCARE AND COMMERCIAL EXPERIENCE

Pharmacist, Batoul Pharmacy; Pharmacist, Nyaho Medical Centre; Medical Sales Representative, Sandoz

EDUCATION

Central University - Bachelor of Pharmacy (BPharm), Pharmacy, 2014 - 2018
